Human Papillomavirus (HPV)
Vaccination Consent Form 2024

The vaccine helps to protect a person from being infected by the Human Papillomavirus. This virus increases the risk of developing some cancers later in life such as cervical cancer, some mouth and throat cancers and some cancers of the anus and genital area, it also helps protect against genital warts. The HPV vaccine does not protect against other sexually transmitted infections.

It is essential that you provide a valid email address when completing the E-consent form to receive correspondence and a confirmation receipt from the immunisation team.

If you have any difficulties accessing or completing the electronic consent form or need any further advice please contact the immunisation team.

Please see link to recent collaboration video with Cardiff City Football Club promoting the HPV vaccine.
